

The Acela Implementation Team is responsible for providing support for the implementations of the Acela Civic Platform. Acela Software enables government to accept applications and fee payment online, coordinate the review of applications and the renewal of licenses. It leverages agency GIS to augment information provided on the application, locate the project in the field. Inspection apps allow government staff to perform inspections and document findings using checklists in the field without returning to the office to complete the reports.

Using Acela for government functions benefits the citizens by providing transparency to the application process, inspection results and permits issued. Governments also benefit through streamlining review process, eliminating redundant data entry and facilitating contactless collection of fees and applications.

Specific Responsibilities

The job of the Implementation Team is to take complex government processes and embed them in solutions on the Acela Civic Platform. Our solutions will be used by local and state government agencies. We are looking for a skilled Software Developer with experience in current technologies and a solid technical background. The ideal candidate will have a combination of experience/exposure to Java, JavaScript, Relational Databases, and Web Services.

The candidate will join a fast-paced team that works together to deliver design, implementation, and enhancements for Enterprise Applications. We are looking for a self-starting, highly energetic, keenly minded individual who is excited to work in an Agile environment.
